

SURGIC[®]

Evolution

Designed to remove your revision worries

Evolution provides an implant removal system for when you are unsure of the spinal implant or system used for previous surgery.

Evolution offers:

- A removal system that is used for the removal of a majority of the spinal implants in the lumbar region of the spine
- Over 70 parts for standard metric and imperial drives, hexalobe, broken, stripped screw removers (with corresponding trephines) and custom implant specific parts are included
- A comprehensive system including extensions, ratcheting T-handle, multi-axial handle, counter-torque wrench, combination wrenches and needle-nose locking pliers
- All of the above are conveniently stored in a single instrument container
- Available to hire with only 24 hours notice
