GPOS is the Global Patient Outcomes System that is provided by Surgi C as a service to its customers. It is a fully Internet based system that analyses patient outcomes for spinal disorders.

GPOS has been developed by a team of spinal clinicians and takes advantage of cutting edge technology. It provides up-to-date information to those who need it when they need it.

Key benefits

- Save time in collecting pre-treatment information
- Patients do all the work
- Database fills up without your intervention
- Get live outcome data based on diagnosis or treatment
- Collaborate and collate your outcomes
- You own all the data

How does it work?

- Clinicians register their patients on GPOS, and choose their language
- Their patients fill in a pre-treatment questionnaire before the consultation (saving time)
- Clinicians enter treatment information
- Post-treatment questionnaires are filled in by the patients after email reminders
- Clinicians can access the vast range of Outcomes Analysis

What outcomes are measured?

- SF-36
- Oswestry Score
- Hospital Depression and Anxiety Score
- Visual Analogue Scores
- Pain Diagram
- Global Outcome Measures

How do Multi-Centre clinical trials work?

- The principal investigator registers the trial on GPOS
- The principal investigator chooses which clinicians will participate
- Patients are sent email reminders to enter their data on the system
- Clinicians have instant access to all trial data as it is entered

Multi-Centre Clinical Trials

Multi-Centre clinical trials can be set up and run quickly and cheaply, because GPOS is internet based, large scale research can be undertaken at a fraction of the normal cost.

More information

For further information on the GPOS service offered by Surgi C, please email info@surgi-c.com or alternatively contact 0121 222 5692.
